MODULE 2 — Conditional Statements and Operators

Question: Grading Students

Platform: HackerRank

Problem Link: [Grading Students]

C Source Code:

```
int* gradingStudents(int grades_count, int* grades, int* result_count) {
    *result_count = grades_count;

    int* result = malloc(grades_count * sizeof(int));

    for (int i = 0; i < grades_count; i++) {
        int grade = grades[i];

        if (grade >= 38) {
            int remainder = grade % 5;

            if (remainder >= 3) {
                grade += 5 - remainder;
            }
        }

        result[i] = grade;
    }

    return result;
}
```
