MODULE 6 — Nested Loops: Online Judge Problems

Question: Printing Pattern Using Loops

Platform: HackerRank

Problem Link: [Printing Pattern Using Loops]

C Source Code:

```c
#include <stdio.h>

int main() {
    int n;
    scanf("%d", &n);

    int size = 2 * n - 1;

    for (int i = 0; i < size; i++) {
        for (int j = 0; j < size; j++) {
            int top = i;
            int left = j;
            int bottom = size - 1 - i;
            int right = size - 1 - j;

            int layer = top;

            if (left < layer) {
                layer = left;
            }
            if (bottom < layer) {
                layer = bottom;
            }
            if (right < layer) {
                layer = right;
            }

            printf("%d ", n - layer);
        }

        printf("\n");
    }

    return 0;
}
```
